

### 2.3.1 Student Centric Methods

#### Participative learning

Participative learning is an educational approach that actively involves students in their learning process through various engaging activities. This method fosters a deeper understanding and retention of knowledge by encouraging students to take an active role in their education. Key components of participative learning include fieldwork, inter and intra-department events, day celebrations, and the publication of newsletters.

Fieldwork provides our students with hands-on experience in real-world settings related to their studies. This practical exposure helps them to apply theoretical knowledge in practical scenarios, enhancing their learning and professional skills. Inter and intra-department events promote collaboration and healthy competition among students. These events encourage our students to learn teamwork, improve communication skills, and foster a sense of community within the institution. They also provide opportunities for students to showcase their talents and learn from peers in different disciplines. Day celebrations mark important cultural, historical, and social events, providing our students with a broader perspective on various subjects. Newsletters serve as a platform for our students to express their ideas, share achievements, and stay informed about departmental activities. Writing and editing newsletters enhance students' communication and editorial skills, while also fostering a sense of pride and ownership in their academic community.

Overall, participative learning creates a dynamic and engaging educational environment that not only enhances academic knowledge but also develops essential life skills, preparing students for future challenges in their personal and professional lives.
